ALTERNATE & DELAYED VACCINE SCHEDULE 2

This schedule starts with individual vaccines, then combines vaccines if the child tolerates individual vaccines well. This schedule does not include all CDC recommended vaccines, as it eliminates Hepatitis B, Rotavirus and Hepatitis A. This schedule delays vaccines significantly, which means that children will have no or partial immunity at the age where they may be at risk for the disease.

The schedule

- 2 months: DTaP (Diptheria, Tetanus, and acellular Pertussis),
- 3 months: Hib (*Haemophilus influenzae B,* ***not*** *the flu vaccine.)*
- 4 months: PCV (Pneumococcal)
- 5 months: DTaP, Hib
- 6 months: PCV
- 7 months DTaP, Hib
- 8 months PCV
- 9 months: IPV
- 12 months: Hib, IPV
- 14 months: IPV
- 15 months: MMR
- 18 months DTaP, PCV
- Age 2: Varicella (or delayed until age 5, if preferred)
- Age 4: DTaP, IPV
- Age 4-5: MMR
- Age 5: Varicella (1 dose if previously given at age 2. 2 doses separated by 1 month if this is the first Varicella vaccine).
